TellPip

FACT SHEET · PRESS KIT

Pip reminds you what you promised. And whispers what to say.

TellPip is the call assistant built in Europe: it listens from your computer, remembers what you promised your clients and suggests the answer from your own documents. The audio never leaves the computer.

How it works

1. Start your call on Zoom, Meet, Teams or any other app: no bot joins the meeting.
2. TellPip transcribes on the computer, with a local model that also works offline and recognises 25 European languages on its own.
3. When you're asked a question, Pip suggests the answer from your documents and from what it remembers about your clients.

At a glance

Client memory

People, promises and open points, brought back at the next call.

Your knowledge

Documents, Notion, Google Drive, OneDrive, SharePoint or a folder.

Notes and emails

Ready moments after the call, in the format you choose.

Invisibility

Pip doesn't show in screen sharing or recordings.

Your way

A small draggable widget, adjustable transparency and text size, "Don't remember this call".

Why it's different

The best-known call assistants were built to get through job interviews unnoticed, and they send your voice to a cloud service. TellPip is built for people who work with clients: lawyers, accountants, financial advisors, sales teams, freelancers. Designed with GDPR in mind.

The numbers

Solo	€25 a month, VAT included (€250 a year)
Everything	€59 a month, VAT included (€590 a year), with invisibility and real-time answers
Enterprise	€150 per seat a month + VAT
